{{! Two pages for everyone: results of the trial and a call to answer. Data: flyer object in feedback.json. }}

First harvest. This is what farmers said.

18 farms in Abia State tested 6 cassava varieties on their own land in 2025. Each farm grew three of them, A, B and C, and said which was best and worst.

LIKED BEST OVERALL, OVERALL PREFERENCE

TOP 3

1. **Biggie**
2. **Baba-70**
3. **Game Changer**

Which variety should you plant?

Biggie and Baba-70 were liked best by most farmers, on yield and overall. Poundable was liked for taste but gave less. The order is still preliminary, so answers from the 7 farms we have not heard from count double.

Based on 11 farms with harvest answers. The order is preliminary and gets more reliable with more answers.

Every trait counts

How the varieties did on each trait through the season, compared with the others.

BEST OPTION ON THE LEFT

Option	Biggie	Baba-70	Game Changer	TME 419	Obasanjo-2	Poundable
Germination [Vegetative] n=15	·	+	·	·	–	·
Vigour [Vegetative] n=15	+	+	·	–	–	––
Yield [Harvest] n=11	+	+	·	–	–	––
Taste [Harvest] n=11	+	·	–	–	·	·
Overall preference [Harvest] n=11	+	+	·	–	–	––

++ Much better + Better · Like the others – Worse –– Much worse

The symbols show the chance that the option beats an average option (++ above 70 %, + above 58 %, – below 42 %, –– below 30 %). The order follows "liked best overall". n is the number of farms with valid answers. Traits with too few answers are left out.

How to send your answers

1 Go to the field and look at the three options A, B and C. **2** For each trait, say which was best and which was worst. **3** Go to climmob.net and use the QR code for your package. You get your own farm report back.
